SAR Certification

730SC meets the technical standards of Ministry of Internal Affairs and Communications (MIC) regarding radio wave absorption by a human body.

These technical standards are established on a scientific basis to prevent radio waves emitted from wireless devices such as mobile phones that are used close to human head from affecting human health. These standards assure that the SAR (Specific Absorption Rate), an indicator of the amount of average energy absorbed in the side of a human head, must not exceed the permissive value of 2W/kg^* . This value includes a substantial safety margin designated to assure the safety of all persons, regardless of age and physical size. The value is equal to the international guideline recommended by International Commission on Non-Ionizing Radiation Protection (ICNIRP) that has a cooperative relationship with the World Health Organization (WHO).

The highest SAR value for 730SC is 0.737 W/kg . This value is obtained in accordance with the MIC testing procedure with the mobile phone transmitting at its highest permitted power level. While there may be differences in the SAR levels depending on phones, they all meet the MIC's permissible value. Because mobile phones are designed to employ the minimum power level required for the communication with the base station, the SAR of the phone during a call is usually below the maximum value.

For further information about SAR, please see the following websites:

MIC: <http://www.tele.soumu.go.jp/ele/index.htm>

ARIB: <http://www.arib-emf.org/initiation/sar.html>

* The guideline is defined by relevant laws and regulations associated with the Radio Law (No. 2 of Article 14 of Ordinance Regulating Radio Equipment).

SoftBank's Body SAR Policy

* Body SAR: The SAR value at the maximum transmission power when continuously talking with handset placed on the body and using earphone-microphone.

** Specific Absorption Rate (SAR): The value measured when having talked continuously for 6 minutes.

*** Placement on the body: Measurements are taken with the rear of handset facing the body at a distance of 1.5 cm as the ordinary handset position. In order to comply with radio frequency exposure requirements, use an accessory (e.g. belt clip, holster) that does not contain metallic parts to maintain a 1.5 cm separation between the body and handset.

For further information, see the following SoftBank website:

<http://www.softbankmobile.co.jp/ja/info/public/emf/emf02.html>

European RF Exposure Information

Your mobile device is a radio transmitter and receiver. It is designed not to exceed the limits for exposure to radio waves recommended by international guidelines. These guidelines were developed by the independent scientific organization ICNIRP and include safety margins designed to assure the protection of all persons, regardless of age and health.

The guidelines use a unit of measurement known as the Specific Absorption Rate, or SAR. The SAR limit for mobile devices is 2 W/kg and the highest SAR value for this device when tested at the ear was 0.737 W/kg*. As mobile devices offer a range of functions, they can be used in other positions, such as on the body as described in this user guide. In this case, the highest tested SAR value is 0.412 W/kg.

As SAR is measured utilizing the devices highest transmitting power the actual SAR of this device while operating is typically below that indicated above. This is due to automatic changes to the power level of the device to ensure it only uses the minimum level required to reach the network.

The World Health Organization has stated that present scientific information does not indicate the need for any special precautions for the use of mobile devices. They note that if you want to reduce your exposure then you can do so by limiting the length of calls or using a hands-free device to keep the mobile phone away from the head and body.

* The tests are carried out in accordance with international guidelines for testing.

Battery & Charger

Before Using Battery or Charger

Charge battery before first use of 730SC or after long periods of disuse.

Charging Battery

- Long periods of disuse may affect battery's ability to hold a full charge. Charge battery at least once every six months while not in use. Otherwise, battery may become unusable.
- Depending on usage, bulges may appear near end of battery life; this does not affect safety.
- 730SC uses a lithium-ion battery; charge battery in anytime without damaging its ability to hold a charge.
- Do not charge battery under the following conditions:
 - In ambient temperatures beyond 5°C - 40°C
 - In high levels of humidity, vibration or dust (May cause malfunction)
 - Near a radio receiver (May cause feedback)
- 730SC or Charger may warm while charging. This is normal, however, should they become very hot to the touch, stop charging and contact Customer Service (☎P.11-22).

- Battery is a consumable; replace it if operating time shortens noticeably.

Note

- **Use specified Charger only. Do not use it for devices other than 730SC.**
- **Battery must be inside 730SC to charge it.**
- **When not in use, unplug Charger from outlet.**

Battery Life

Battery time/life may be reduced by any of the following:

- Environmental Factors
 - Storing/using 730SC beyond 5°C - 40°C
 - Using 730SC when signal is poor/out-of-range
 - Debris on 730SC, battery or Charger Port
- Operational Factors
 - Camera use
 - Media Player use
 - Heavy Keypad use (e.g., for messaging)
- Settings
 - Increasing *Brightness* or *Backlight time*
 - Using Media Player with Backlight set to *Always on*

Battery Disposal

Do not dispose of exhausted batteries with ordinary refuse. Tape over battery terminals before disposal or take to a SoftBank shop. Follow any and all local regulations regarding battery disposal. Lithium-ion batteries are recyclable.

When Battery Runs Out

When battery is weak, a warning appears and 730SC beeps. Charge or replace battery; otherwise 730SC will automatically turn off.

Inserting & Removing Battery

Inserting

- 1 Press and slide Battery Cover as shown

- 2 Remove Battery Cover

- 3 Fit battery into 730SC as shown

- 4 Replace Battery Cover

Note

- Remove battery cover with care; stress on tabs may damage them.
- Gently insert battery to avoid damaging 730SC tabs.

Removing

Always turn 730SC off before removing battery. Never remove battery while AC Charger is connected.

- 1 Press and slide Battery Cover as shown

2 Remove Battery Cover

3 Lift battery up and remove as shown

USIM Card

Information & Precautions

Universal Subscriber Identity Module (USIM) Card is an IC card containing customer and authentication information, including handset number and limited storage for Phonebook entries and SMS. Install USIM Card to use 730SC; turn 730SC power off to insert/remove USIM Card.

USIM Card

Insert USIM Card into another compatible handset to access SMS and Phonebook entries saved on USIM Card. Note the following precautions regarding USIM Card usage and care (see USIM Card User Guide for details):

- Avoid using excessive force when inserting/removing USIM Card.
- SoftBank is not liable for damage resulting from inserting USIM Card into IC card readers or other third party devices.

- Always keep USIM Card IC chip clean.
- Clean USIM Card IC chip with a soft, dry cloth.
- Do not attach labels to USIM Card; malfunction may result.

Note

- **USIM Card is the property of SoftBank.**
- **If USIM Card is lost or damaged, you will be charged for reissuing it.**
- **Return USIM Card to SoftBank upon termination of subscription.**
- **Returned USIM Cards are recycled.**
- **USIM Card specifications may change without prior notice.**
- **If USIM Card or 730SC with USIM Card inserted is lost or stolen in Japan or abroad, immediately contact Customer Service (☎P.11-22) to suspend service.**
- **Handset/USIM Card repairs, replacement or upgrades may deactivate Chaku-Uta[®], Chaku-Uta Full[®] or video files on handset.**
- **Back-up USIM Card files. SoftBank is not liable for lost files.**

Inserting & Removing USIM Card

Always turn power off before opening 730SC to remove battery or insert/remove USIM Card.

Inserting

- 1 Remove battery (ⓍP.11-3)
- 2 With IC chip down, insert USIM Card into card slot as shown in the illustration

- 3 Push in USIM Card until it stops and locks

Removing

- 1 Remove battery (ⓍP.11-3)
- 2 Press down on USIM Card and gently slide it out

Note

- Inserting USIM Card with excessive force may damage it or 730SC.
- Do not misplace a removed USIM Card.
- To prevent damaging it, avoid touching the IC chip when inserting or removing USIM Card. Do not touch battery contacts.

PIN

USIM Card features 2 security codes: PIN and PIN2.

PIN

Use PIN (4- to 8-digit) to prevent unauthorized use of 730SC by others.

- Modify PIN (ⓘP.8-2).
- When PIN lock is activated, PIN entry is required each time 730SC is turned on or whenever USIM Card is re-inserted (ⓘP.8-2).

PIN2

PIN2 (4- to 8-digit) is required for Reset Call Cost or Edit Cost Limit, etc.

- Modify PIN2 (ⓘP.8-2).

Canceling PIN Lock (PUK/PUK2 Code)

Incorrectly entering PIN or PIN2 three consecutive times activates PIN Lock and limits 730SC function access. Enter PUK (PIN Unlocking Key) Code to cancel PIN Lock.

For more information, contact Customer Service (ⓘP.11-22).

Note

- Entering PUK or PUK2 incorrectly ten consecutive times locks USIM Card and deactivates 730SC. Take a note of PUK and PUK2.
- A locked USIM Card cannot be unlocked. Contact Customer Service (ⓘP.11-22).

SoftBank 730SC

Item	Specification
Weight	95.9 g*
Continuous Talk Time	Voice Call: 270 minutes*
Continuous Standby Time (Turning off Display)	500 hours*
Dimensions (W x H x D)	44.5 x 107.9 x 14.7 mm*
Maximum Output	0.25 W

*Approximate Value

- 730SC with battery installed.
- Battery Time is calculated by SoftBank under stable signal conditions. Calling in poor signal conditions or leaving 730SC on out-of-range will consume more power and may reduce Battery Time by more than half.
- Frequent 730SC operations requiring Backlight may reduce Continuous Talk Time and Continuous Standby Time.
- Using video for Wallpaper may significantly reduce Continuous Talking and Continuous Standby Times.
- Continuous Talk Time is an average measured with a battery in stable signal conditions. Continuous Standby Time is an average measured with a new, fully charged battery with 730SC without calls or operations, in Standby, in stable signal conditions. Alternating between usage and Standby shortens Continuous Talk Time and Continuous Standby Time. Talk Time/Standby Time may vary by environment (battery status, ambient temperature, etc.).
